

PRASHANT REDDY PILLA

New York, NY · prashantreddypilla@gmail.com · [linkedin.com/in/prashant-pilla](https://www.linkedin.com/in/prashant-pilla) · github.com/prashant-pilla

PROFESSIONAL SUMMARY

AI engineer with production experience building AI systems for investment analysis, Fortune 100 institutional clients, and decentralized platforms. Skilled at translating complex technical systems into actionable business outcomes and owning multi-workstream delivery end-to-end across diverse stakeholder environments. Seeking a role applying AI and systems expertise to client strategy and technology transformation.

EXPERIENCE

Tribute Labs — New York, NY

Sept 2025 – Present

AI Engineer — AI-Powered VC & Institutional Investment Platform

- Rebuilt a production AI investment analysis platform migrating from GPT-4 to GPT-5, re-architecting the full prompt pipeline and integrating a neural-network RAG system (Pinecone) for higher-fidelity information retrieval across pitch decks and market data.
- Designed and implemented a multi-stage agentic pipeline that ingests pitch decks, orchestrates a research agent across web, and synthesizes structured investment reports covering financials, market sizing, founder analysis, and investment recommendation.
- Led client delivery for **Stellantis** (Fortune 100), adapting the core AI platform to evaluate VC fund portfolios for institutional pension fund allocation decisions — scoped requirements, re-engineered the data pipeline for fund-level documents, and delivered end-to-end.
- Engineered the visual report output layer, transforming AI-synthesized analysis into polished, investment-committee-ready documents used directly in capital allocation decisions.
- Extended the platform to support DAO clients (Flamingo DAO, The LAO, Dorm DAO); redesigned public-facing websites and restructured data architecture across a shared monorepo to improve cross-platform data flow and maintainability.

University of Minnesota — Minneapolis, MN

Sept 2024 – Aug 2025

AI & Machine Learning Researcher

- Led end-to-end research applying LSTM deep learning to S&P 500 market forecasting; published preprint at arxiv.org/abs/2501.17366, demonstrating full project ownership from hypothesis to publication.
- Designed structured experiments on model architecture, batch optimization, and training throughput; synthesized quantitative findings into analytical reports presented to faculty stakeholders.
- Built reproducible production-quality preprocessing pipelines (Python, Pandas, NumPy), reducing data preparation overhead by 18% and establishing new lab standards for pipeline reusability.

Loyalty Juggernaut — Palo Alto, CA

Jun 2023 – Aug 2023

Software Engineering Intern

- Designed an automated REST API data synchronization solution that improved backend processing efficiency 5×; presented the solution architecture to engineering leadership and adopted into production.
- Contributed to scalable backend integrations supporting high-volume production workloads, collaborating cross-functionally across product, QA, and infrastructure teams.

SELECTED PROJECTS

S&P 500 AI Forecasting Model — *Python, PyTorch, LSTM*

arxiv.org/abs/2501.17366

- Published ML research on equity market prediction; demonstrates ability to scope ambiguous open-ended problems, execute structured analysis, and deliver a professional output — a core consulting competency.

Drone Delivery Multi-Agent Simulation — *Python, C++, Docker*

youtu.be/94SR9GqrnaE

- Architected a multi-agent coordination and priority-queue scheduling system evaluated under variable workloads; directly analogous to enterprise capacity planning and systems optimization engagements.

EDUCATION

University of Minnesota, College of Science & Engineering — Twin Cities, MN

Bachelor of Science, Computer Science Dean's List, MCAE Scholar, MLK Scholar

Relevant Coursework: Advanced AI Methods · Applied Machine Learning · Data Structures & Algorithms · Network Systems Engineering · Parallel Computing

SKILLS & CAPABILITIES

AI & Systems

GPT-5/LLM integration, prompt engineering, agentic pipelines, RAG (Pinecone), PyTorch, TensorFlow, LSTM/CNN modeling, Scikit-learn

Data & Cloud

Python, SQL, Pandas, NumPy, AWS (EC2, S3), Docker, REST APIs, pipeline design, data architecture, monorepo development

Consulting

Client solution delivery, stakeholder communication, full-stack development, executive-ready reporting, multi-workstream project ownership
